

THE IRON MARVEL

**CAPTAIN MARVEL IN STARK-TECH ARMOR
GLEUME COSPLAY, WINTER 18/19**

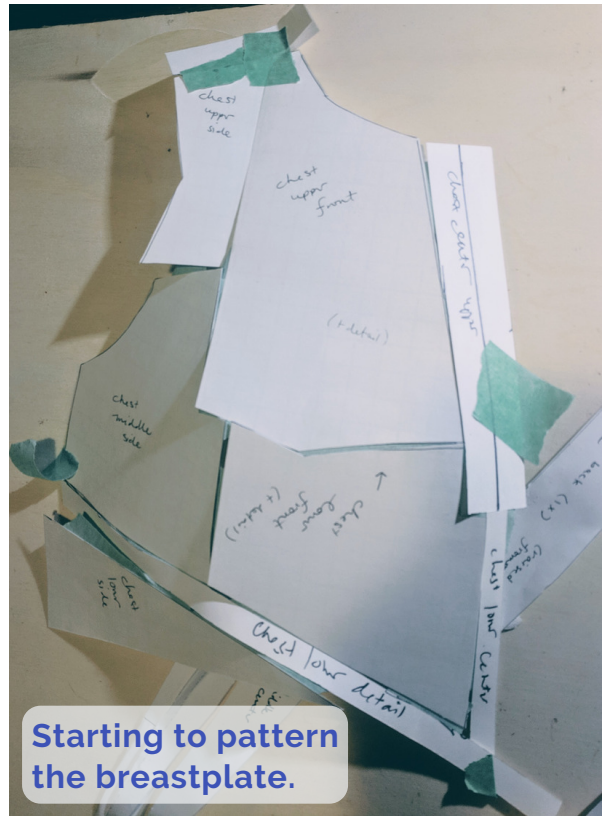

Rescue

Captain Marvel

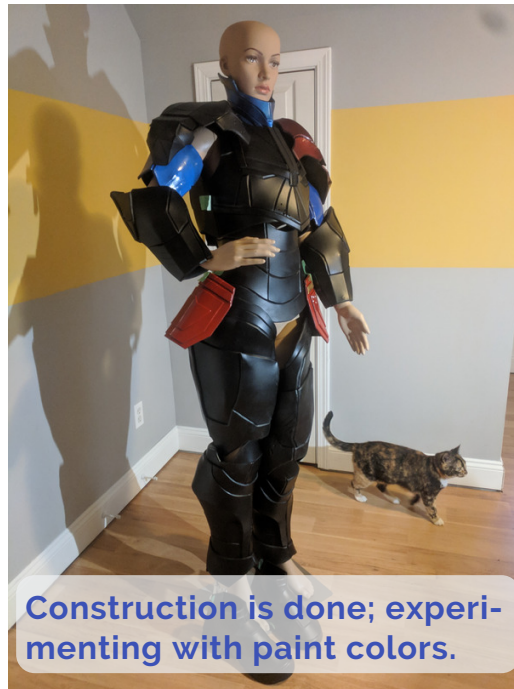

The suit is a combination of modified Rescue pepakura files and self-drafted armor.

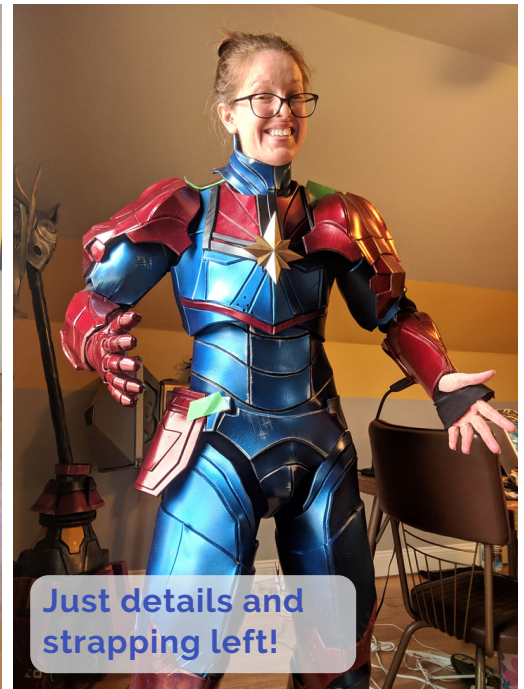

Starting to pattern the breastplate.

Trying on to see if the concept would work...

Construction is done; experimenting with paint colors.

Just details and strapping left!

The costume includes 22 pieces of foam armor, two mohawks, and a self-drafted undersuit. Construction lasted from November 2018 to February 2019.

The helmet has two mohawks - one for when being held and one for when being worn.

I experimented with dremeling or burning the furrows in the armor, but didn't think it made enough of a dramatic effect. Gluing foam pieces got the exact effect I wanted. The breastplate alone is over 40 separate shapes.

Thighs and calves from pepakura patterns.

Sanding bubbly paint off of the helmet :(

The armor is painted with Dupli-Color Perfect Match auto paint and detailed with Tamiya acrylics. The auto paint is very sensitive to temperature and humidity; finding safe days and places to paint (and sanding off the painful mistakes) was the most difficult and stressful part of the build.
